Source Separation

- Decomposition of audio stream into different sound sources
- Central task in digital signal processing
- “Cocktail party effect”

Source Separation

- Decomposition of audio stream into different sound sources
- Central task in digital signal processing
- “Cocktail party effect”
- Several input signals
- Sources are assumed to be statistically independent

Source Separation (Music)

- Main melody, accompaniment, drum track
- Instrumental voices
- Individual note events
- Only mono or stereo
- Sources are often highly dependent

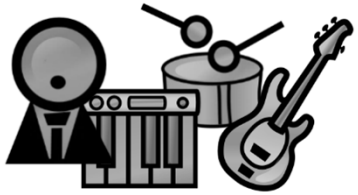
Mixture:



- Clearly harmonic sounds of singing voice and accompaniment

- Noise-like sounds
- Vibrato/glissando sounds

- Drum hits
- Fricatives & plosives in singing voice
