Chapter 6: Design of Tonal Features

Harmonic Feature Design

Motivation

- Harmony analysis:
  - Recognition of **specific** chords, keys, …
  - Resulting features / analyses characterize a **specific** piece
  - Allows for playing / accompaniment
  - Sensitive to transpositions, **key-dependent**
- Harmonic features:
  - Describe more **general** properties of a piece
  - Characterize musical „language“ or **style**
  - Allow for historical analysis / style classification
  - Independent of key, **transposition-invariant**
  - Quantification of chord **types**, **relative** chord transitions, …

Harmonic Feature Design

Overview

- Measuring Interval and Chord Categories
- Measuring Tonal Complexity

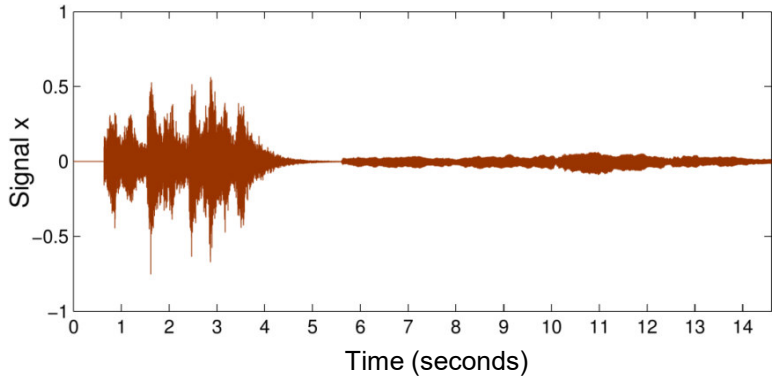
Harmonic Feature Design

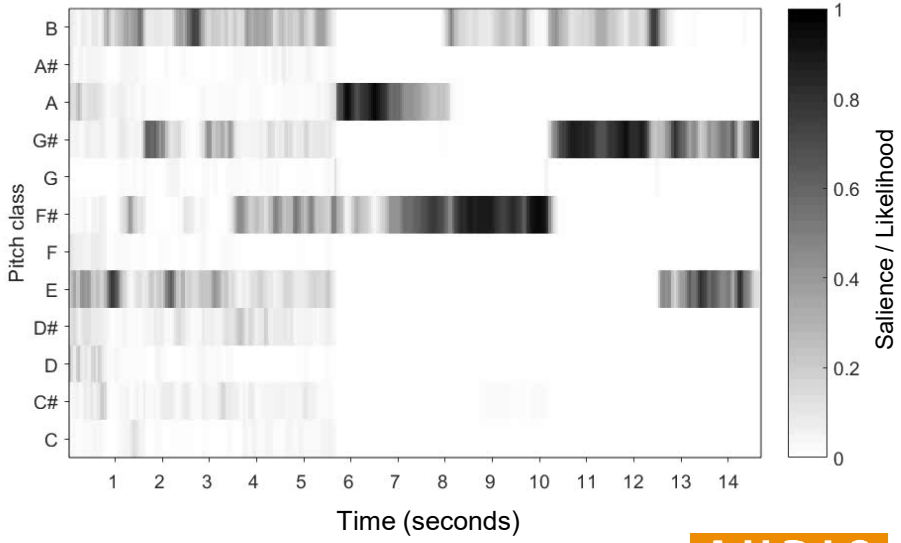
Overview

- Measuring Interval and Chord Categories
- Measuring Tonal Complexity

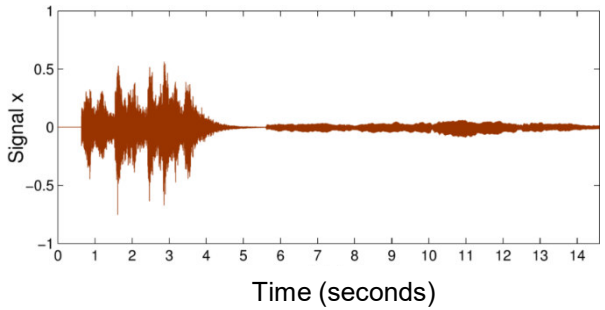
Signal Processing: Chroma Features

L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic



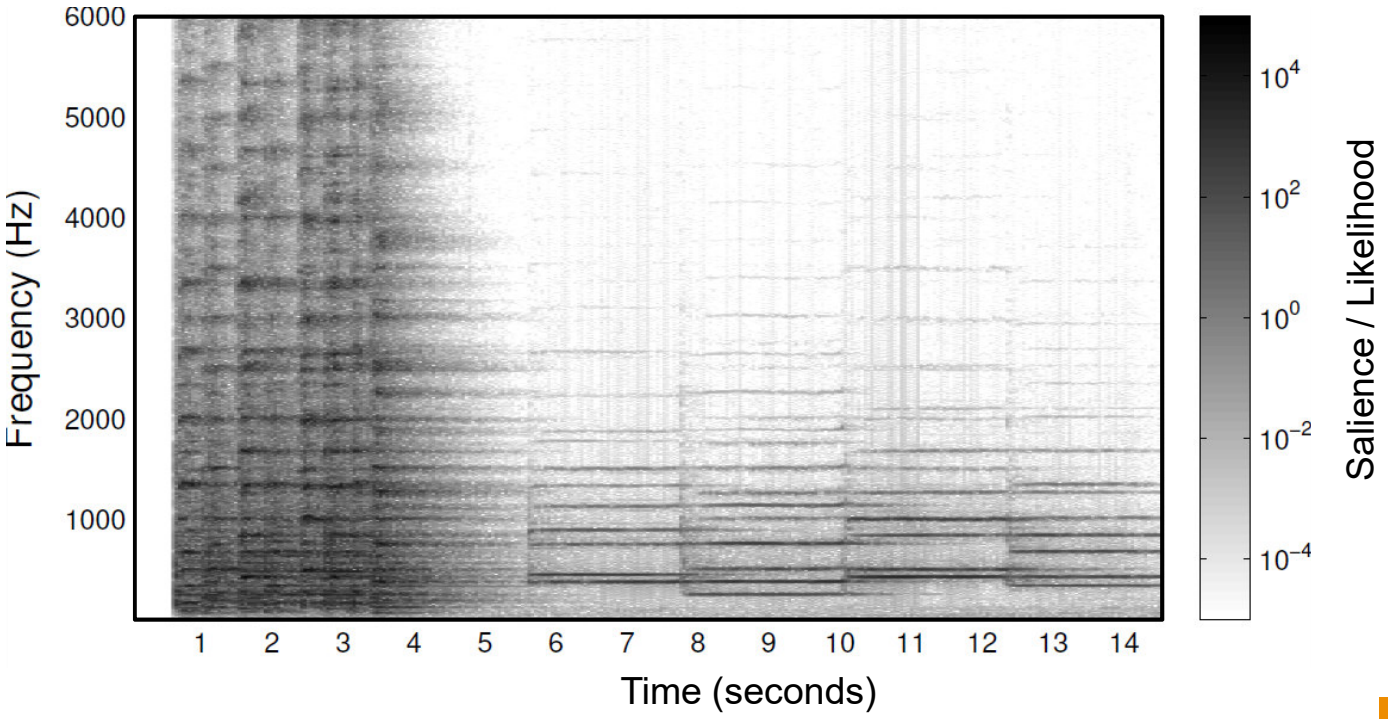


Signal Processing: Chroma Features

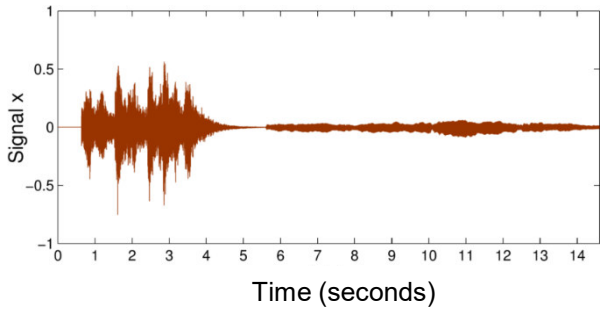


L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic

Spectrogram: Time – Frequency

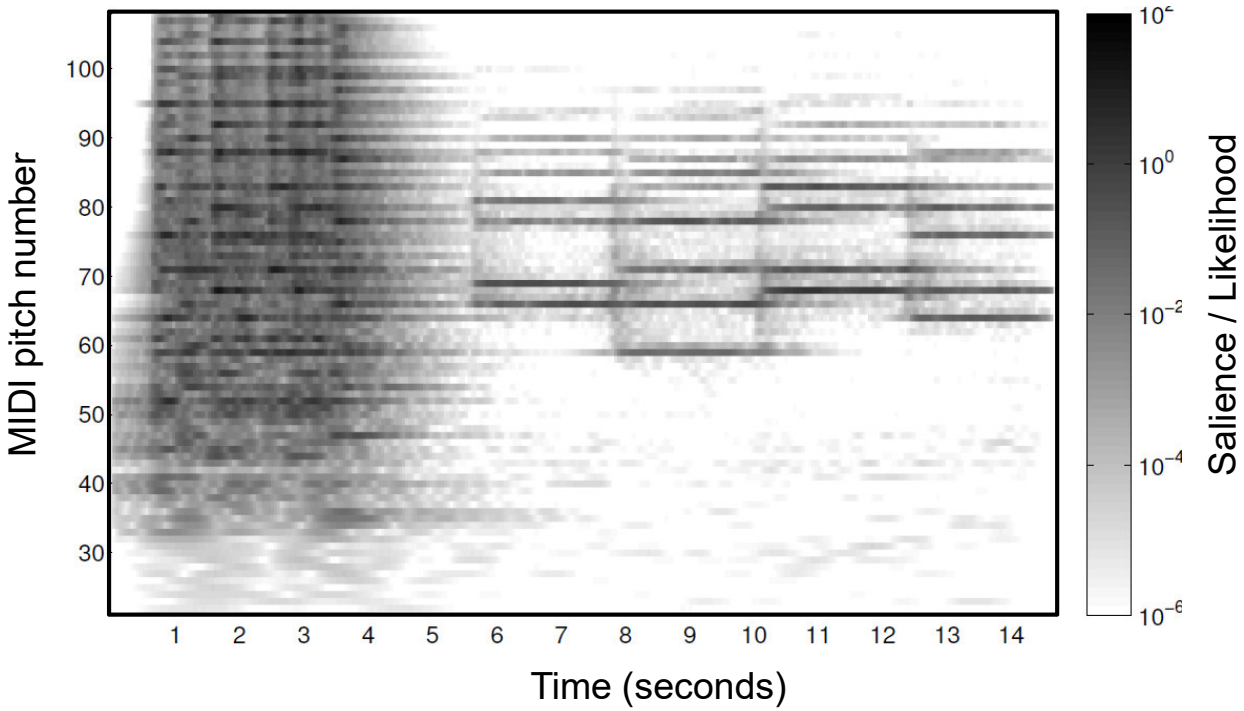


Signal Processing: Chroma Features



L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic

Log-Frequency-Spectrogram: Time – Pitch



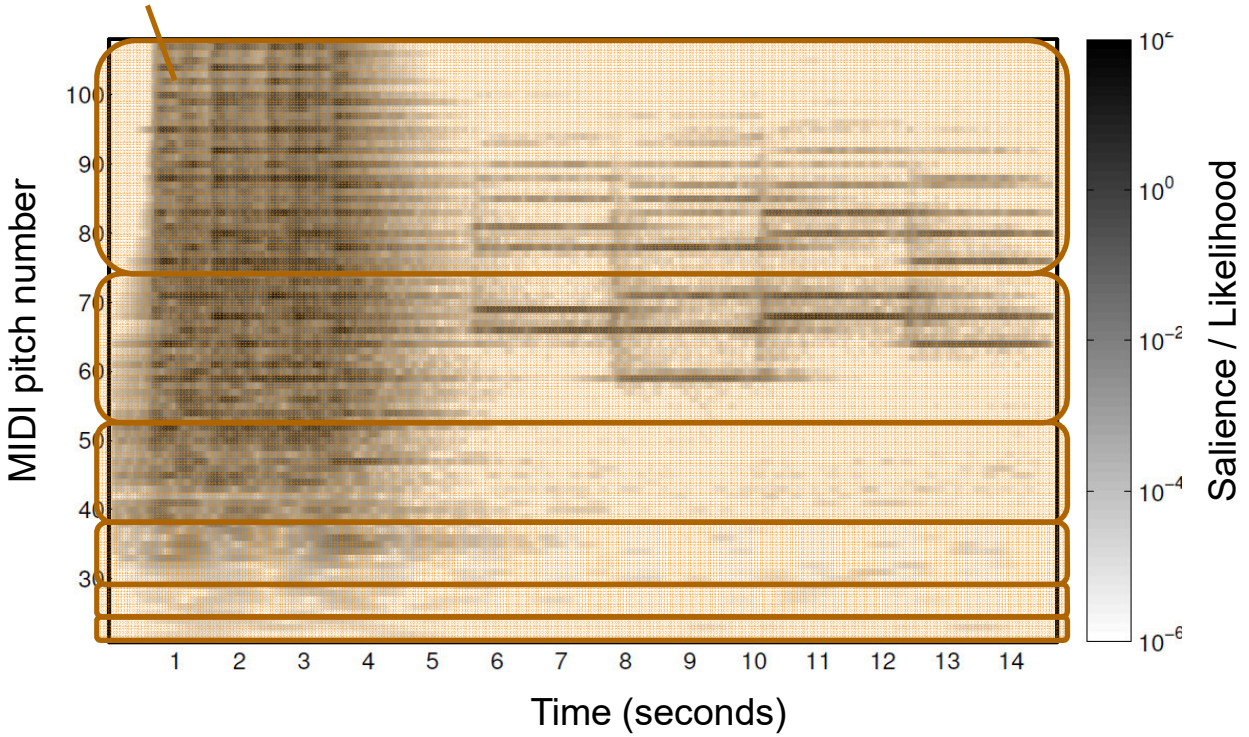
Signal Processing: Spectral Features

→ independent of exact pitches

→ describe **timbral** properties (sound color)

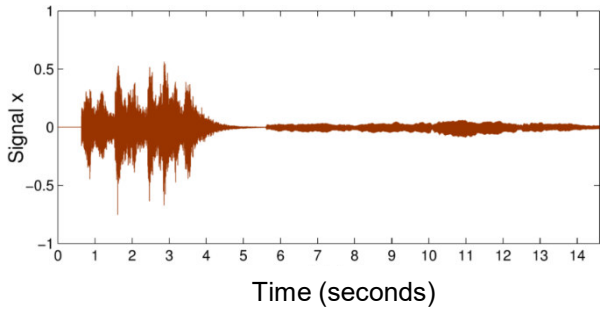
„standard features“ for genre classification

Frequency bands: Loudness, Spectral Flatness, Spectral Centroid



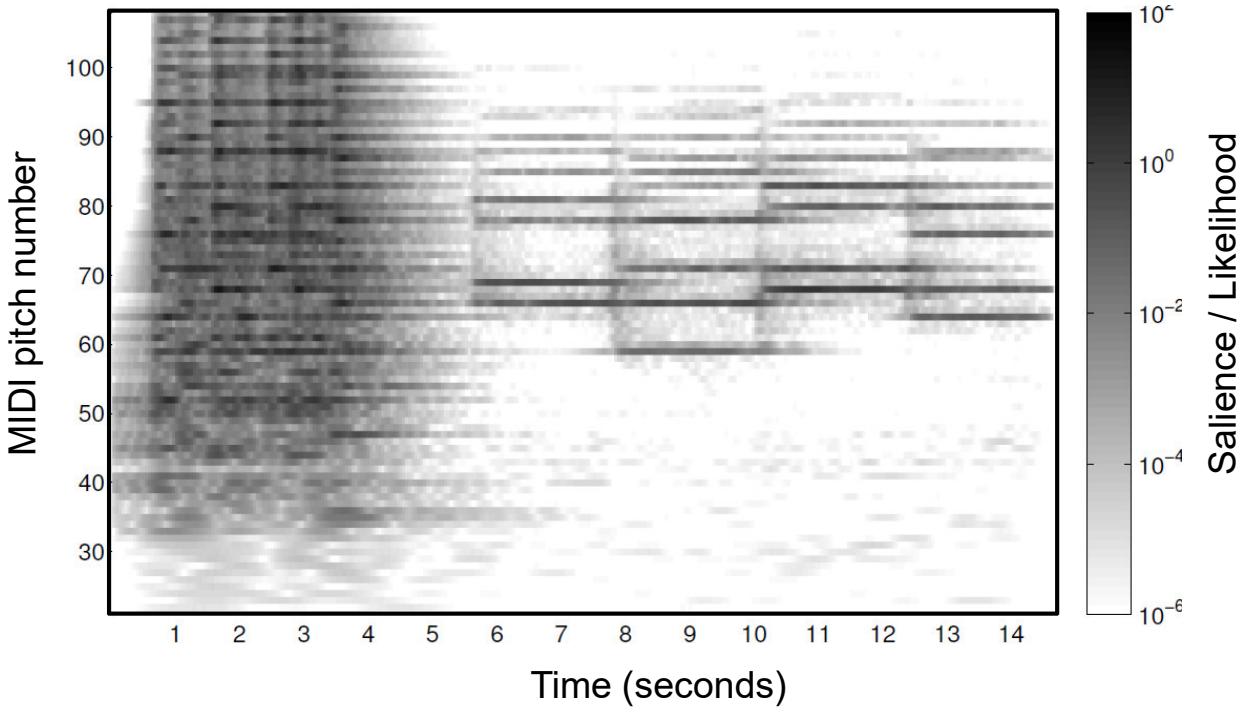
AUDIO LABS

Signal Processing: Chroma Features

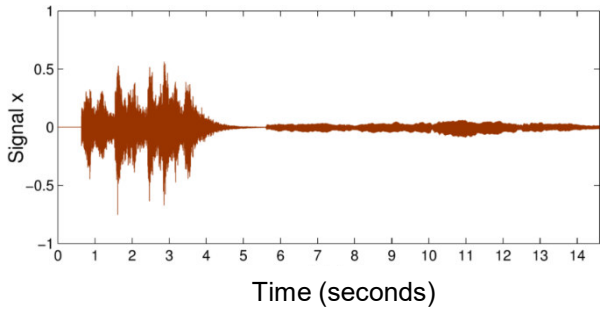


L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic

Log-Frequency-Spectrogram: Time – Pitch

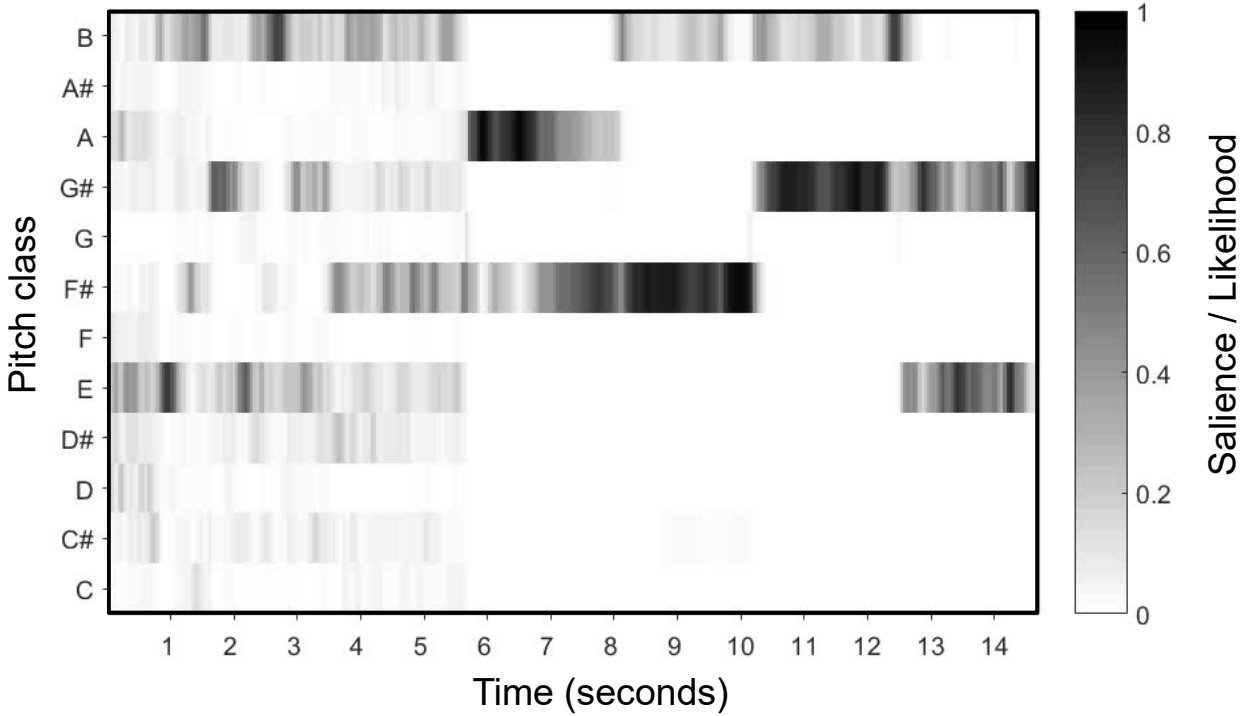


Signal Processing: Chroma Features



L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic

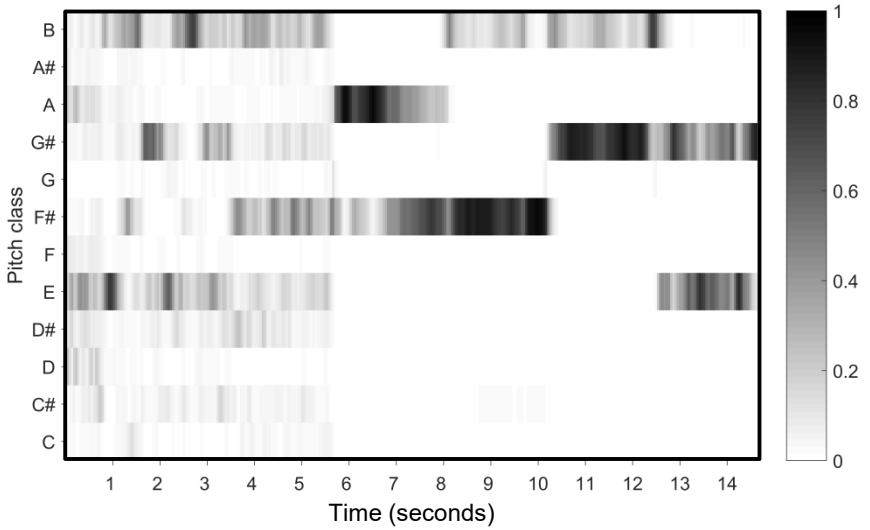
Chromagram: Time – Pitch class



Signal Processing: Chroma Features

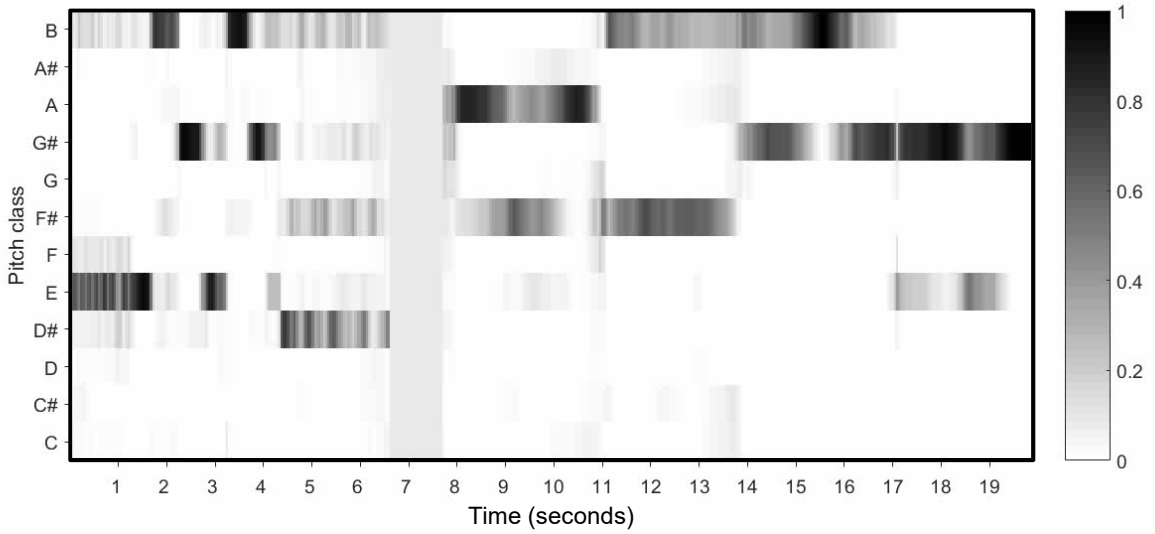
- Orchestra

L. van Beethoven,
Fidelio, Overture,
Slovak Philharmonic



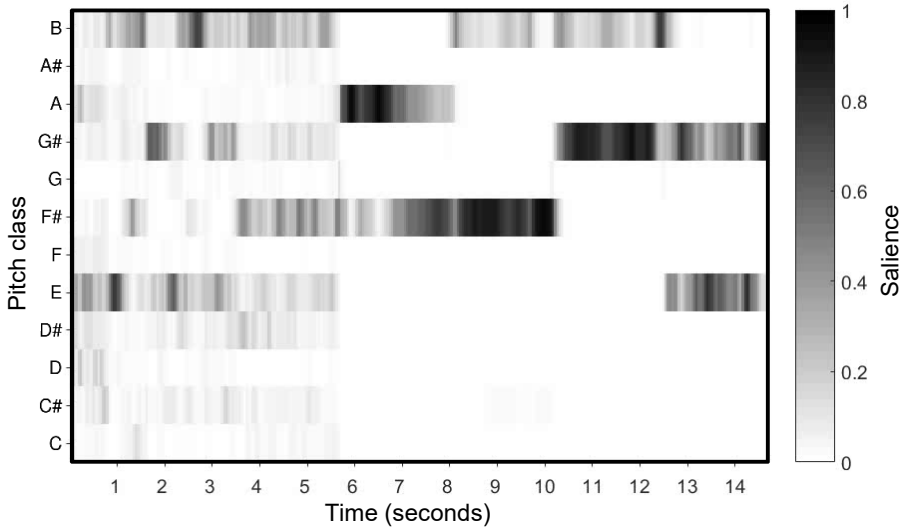
- Piano

Fidelio, Overture,
arr. Alexander Zemlinsky
M. Namekawa, D.R. Davies,
piano four hands

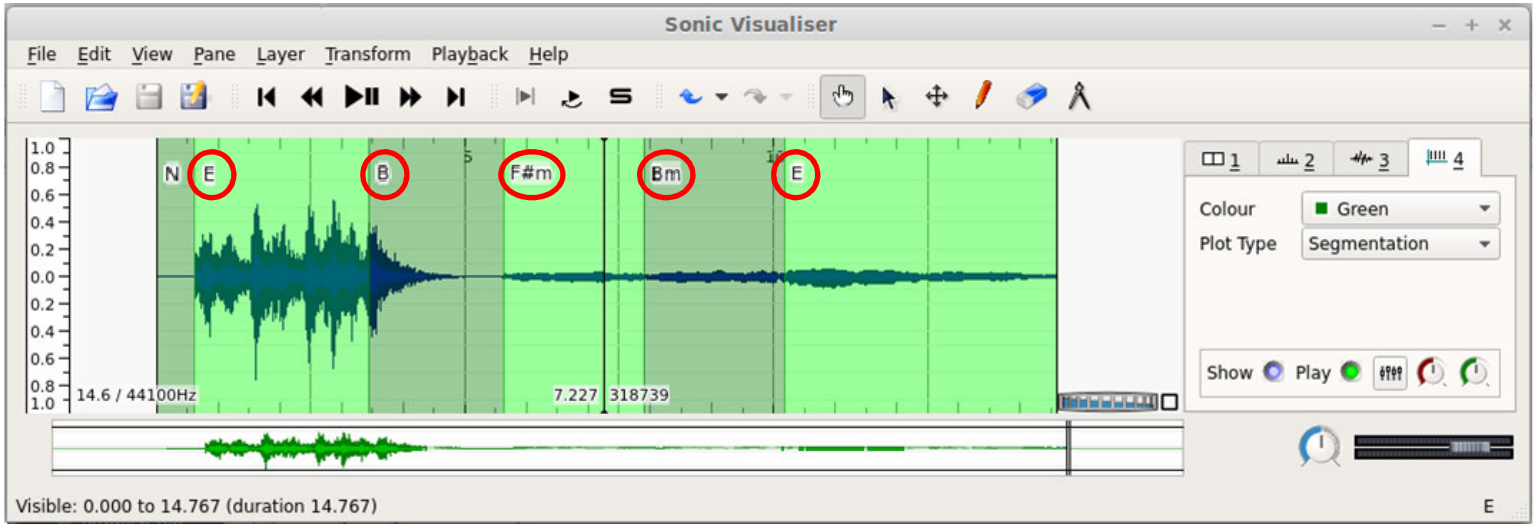


Design of Harmonic Features

- Chromagram



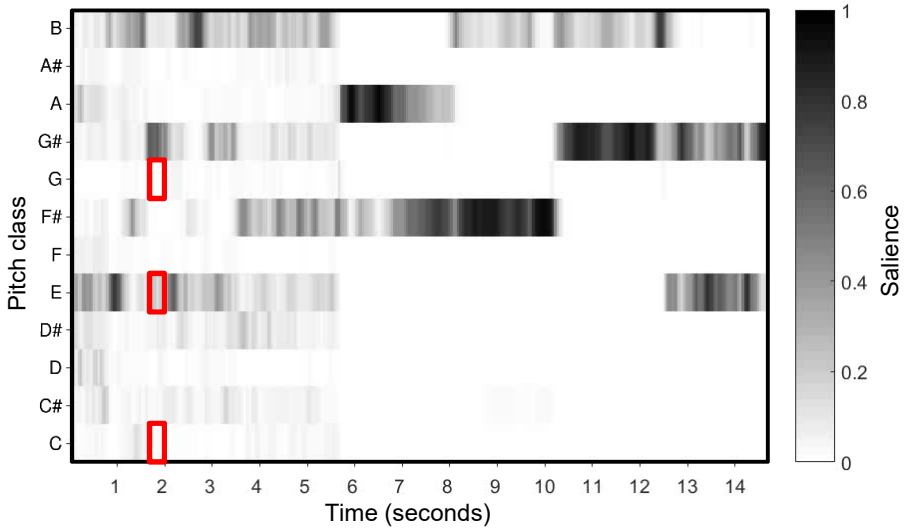
- Chord Recognition (HMM-based)



Sonic Visualizer, Chordino Plugin (Queen Mary Univ., London)

Design of Harmonic Features

- Chromagram

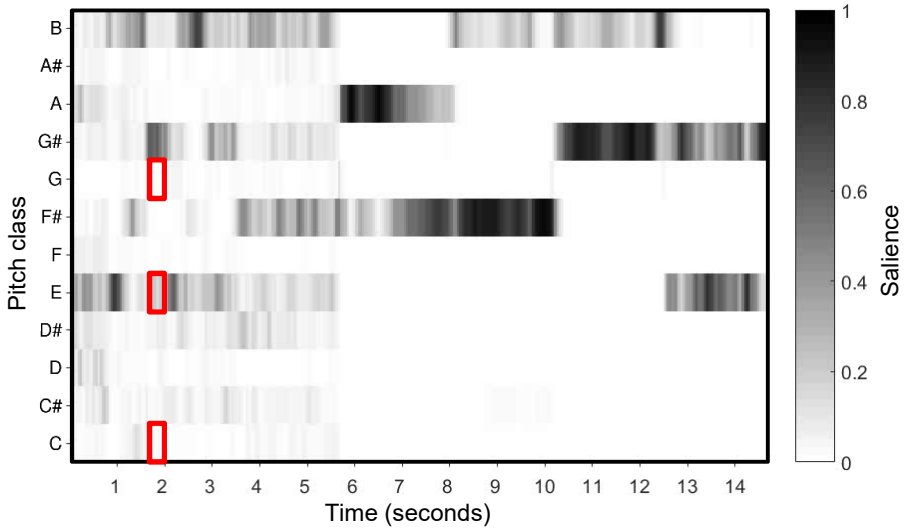


- Chord types
  - Major / minor / diminished / augmented?
  - Probabilities / likelihoods (*continuous*) instead of recognition (*discrete*)
  - Multiply chroma values that form a certain chord

AUDIO LABS

Design of Harmonic Features

- Chromagram



- Chord types
  - Major / minor / diminished / augmented?
  - Probabilities / likelihoods (*continuous*) instead of recognition (*discrete*)
  - Multiply chroma values that form a certain chord
  - Repeat this for all cyclic shifts

AUDIO LABS

Design of Harmonic Features

- Chromagram

Tonal Complexity

Requirements

- Realization of complexity measure Γ
- Input: L1-normalized choma vector (entries sum to 1)

- Boundary conditions:
  - Sparse chroma vector: $\mathbf{c}^{\text{sparse}} := (1,0,0,0,0,0,0,0,0,0,0,0)^{\mathrm{T}}$

    $\rightarrow Complexity = 0$

    
  - Flat chroma vector: $\mathbf{c}^{\text{flat}} := \frac{1}{12} \cdot (1,1,1,1,1,1,1,1,1,1,1,1)^{\mathrm{T}}$

    $\rightarrow Complexity = 1$

      - All other chroma vectors:

    $\rightarrow 0 < Complexity < 1$

AUDIO LABS

Tonal Complexity

Entropy measure

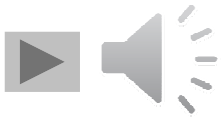
- Compute Shannon entropy of chroma vector:

$$\Gamma_{\mathrm{Entr}}(\mathbf{c}) := -\frac{1}{\log_2(12)} \left(\sum_{q=0}^{11} c_q \cdot \log_2(c_q) \right)$$

- Sparse chroma vector: $\mathbf{c}^{\mathrm{sparse}} := (1,0,0,0,0,0,0,0,0,0,0,0)^{\mathrm{T}}$

$\rightarrow Complexity = 0$

- Flat chroma vector: $\mathbf{c}^{\mathrm{flat}} := \frac{1}{12} \cdot (1,1,1,1,1,1,1,1,1,1,1,1)^{\mathrm{T}}$



$\rightarrow Complexity = 1$

- All other chroma vectors:

$\rightarrow 0 < Complexity < 1$

AUDIO LABS

Tonal Complexity

Flatness measure

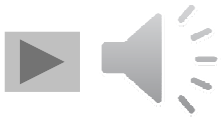
- Compute Flatness measure (ratio of geometric and arithmetic mean):

$$\Gamma_{\mathrm{Flat}}(\mathbf{c}) := \frac{\left(\prod_{q=0}^{11} c_q\right)^{1/12}}{\frac{1}{12}\sum_{q=0}^{11} c_q}$$

- Sparse chroma vector: $\mathbf{c}^{\mathrm{sparse}} := (1,0,0,0,0,0,0,0,0,0,0,0)^{\mathrm{T}}$

$\rightarrow Complexity = 0$

- Flat chroma vector: $\mathbf{c}^{\mathrm{flat}} := \frac{1}{12} \cdot (1,1,1,1,1,1,1,1,1,1,1,1)^{\mathrm{T}}$



$\rightarrow Complexity = 1$

- All other chroma vectors:

$\rightarrow 0 < Complexity < 1$

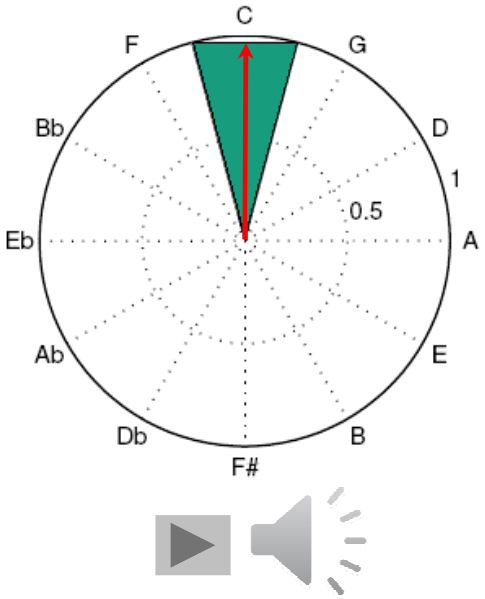
Tonal Complexity

Fifth-width measure

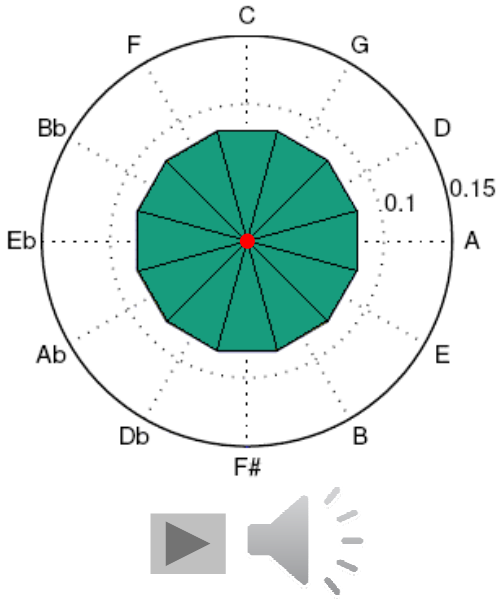
- Compute Width of Distribution over *Circle of Fifths* (angular deviation):

$$\Gamma_{\text{Fifth}}(\mathbf{c}) := \sqrt{1 - r_{\text{fifth}}(\mathbf{c})} \qquad \text{with} \qquad r_{\text{fifth}}(\mathbf{c}) = \left| \sum_{q=0}^{11} c_q^{\text{fifth}} \exp\left(\frac{2\pi \mathrm{i} q}{12}\right) \right|$$

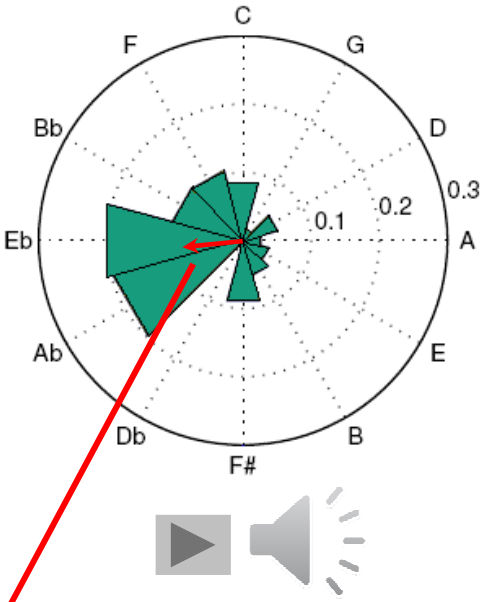
$Complexity = 0$



$Complexity = 1$



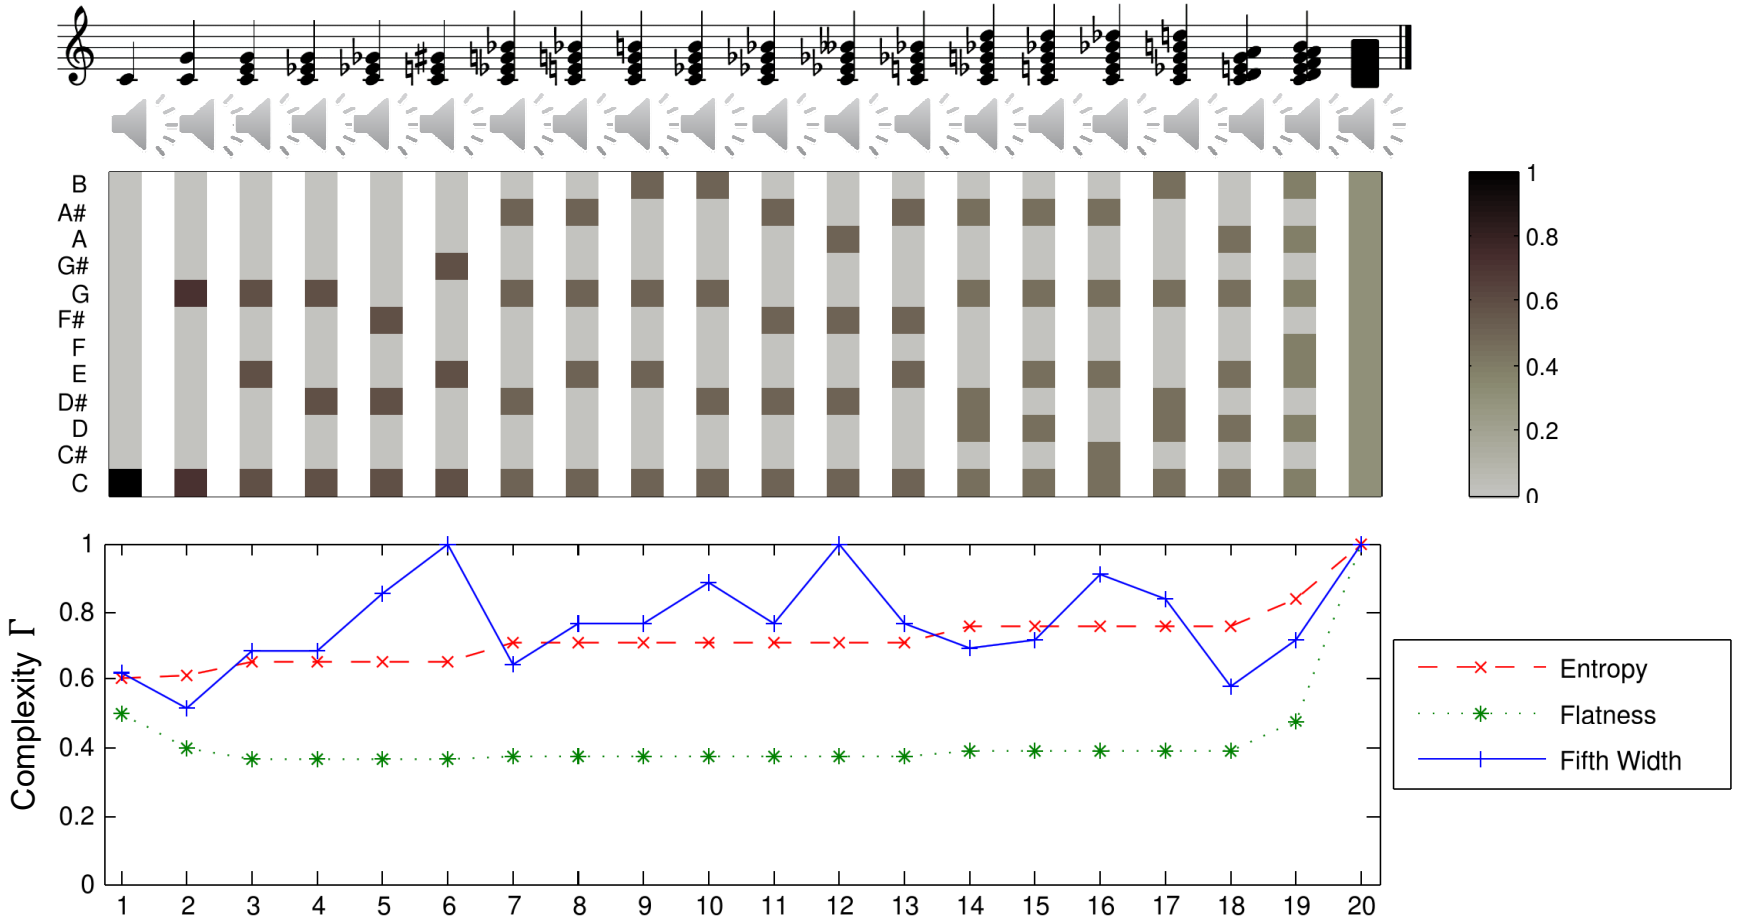
$Complexity = 0.6$



$Complexity = 1 - r_{\text{fifth}}(\mathbf{c})$

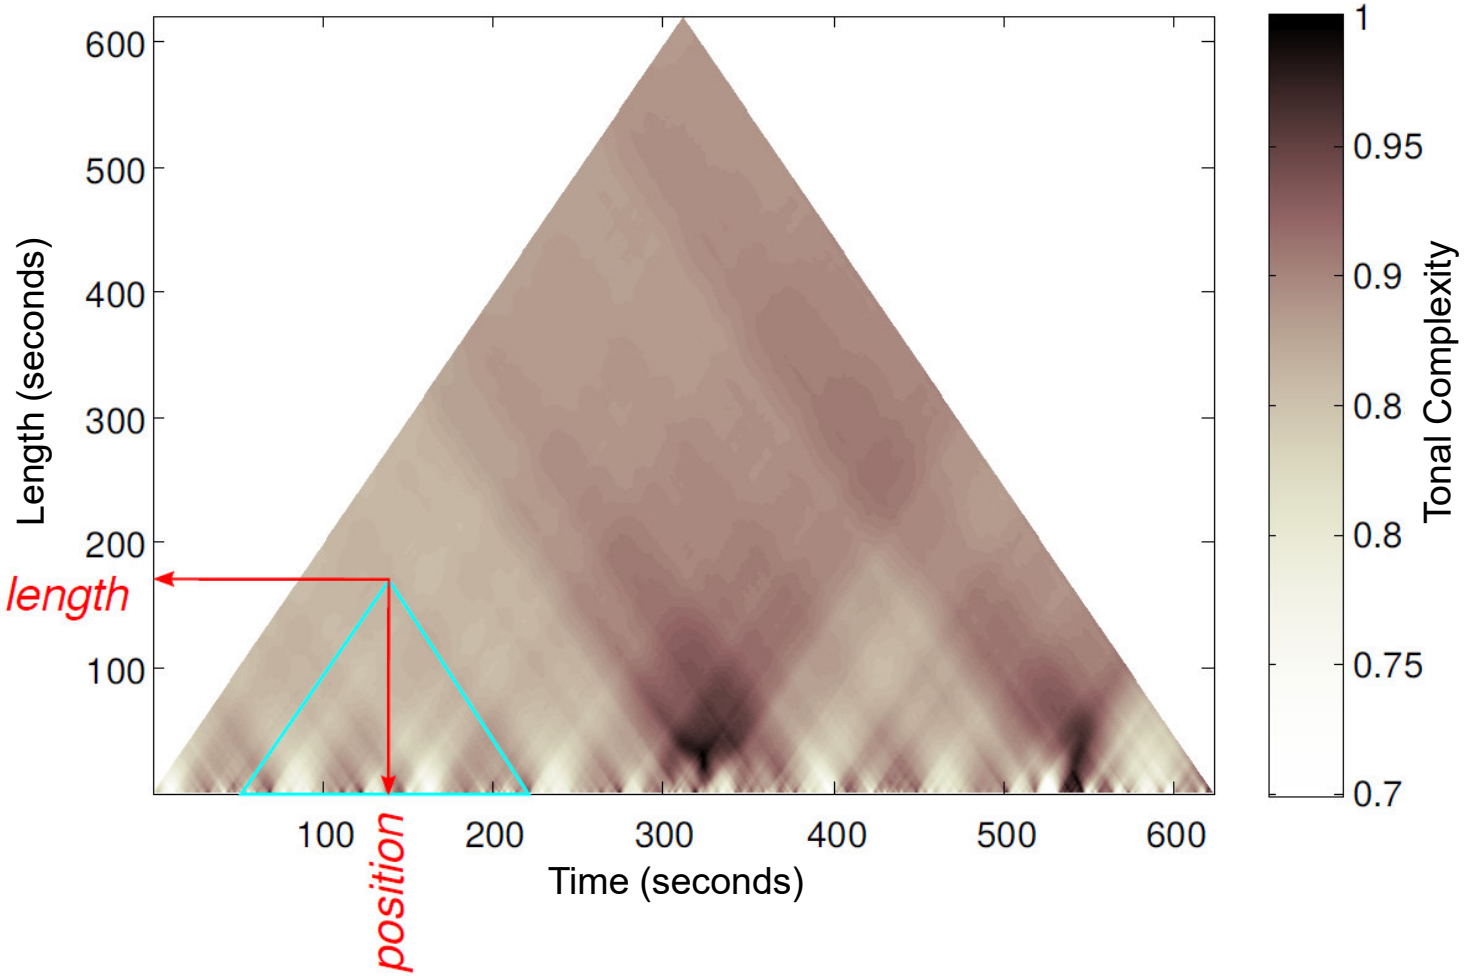
AUDIO LABS

Tonal Complexity – Chords



Tonal Complexity – Scape Plot Representations

- Complexity relates to multiple time scales
- Multi-scale visualization technique: Scape plot



Tonal Complexity – Beethoven's Sonatas
