Chapter 2: Musicological Foundations

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- Scales

Part II:

- Chords
- Keys and the Circle of Fifths

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- Scales

Part II:

- Chords
- Keys and the Circle of Fifths

Tone and Pitch

Harmonic series | overtone series

<i>Partial No. h</i>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Overtone No.</i>	-	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

$$f_{\text{Part}}(h) := h \cdot f_0$$

- Notation: only approximation
- *Mathematical*: harmonics (integer multiples)
- *Physical*: partials/overtones – not the same (inharmonicities)
- Counting of fundamental: harmonics/partial vs. overtones

Intervals

Harmonic series | overtone series

<i>Partial No. h</i>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Overtone No.</i>	-	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

$$f_{\text{Part}}(h) := h \cdot f_0$$

Intervals: harmonic frequency ratios $\frac{f^b}{f^a}$

- 2:1 – Octave

Intervals

Harmonic series | overtone series

<i>Partial No. h</i>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Overtone No.</i>	-	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

$$f_{\text{Part}}(h) := h \cdot f_0$$

Intervals: harmonic frequency ratios $\frac{f^b}{f^a}$

- 2:1 – Octave
- 3:2 – Fifth

Intervals

Harmonic series | overtone series

<i>Partial No. h</i>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Overtone No.</i>	-	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

$$f_{\text{Part}}(h) := h \cdot f_0$$

Intervals: harmonic frequency ratios $\frac{f^b}{f^a}$

- 2:1 – Octave
- 3:2 – Fifth
- 5:4 – Major Third

With perfect mathematic ratios: **pure intervals**

Intervals

Generic Intervals

<i>No. of Steps</i>	0	1	2	3	4	5	6	7
<i>Diatonic size</i>	1	2	3	4	5	6	7	8
<i>Generic name</i>	Unison	Second	Third	Fourth	Fifth	Sixth	Seventh	Octave

- **Generic intervals:** only diatonic size (ignoring accidentals)
- Obtained by counting distance in staff lines & spaces
- **Simple intervals:** Up to the octave
- **Compound intervals:** Larger than octave
- *Compound = Simple + Octave(s)*

Intervals

Generic Intervals

<i>No. of Steps</i>	0	1	2	3	4	5	6	7
<i>Diatonic size</i>	1	2	3	4	5	6	7	8
<i>Generic name</i>	Unison	Second	Third	Fourth	Fifth	Sixth	Seventh	Octave

- High similarity of octave-related pitches (same **pitch class!**)
- → high similarity of intervals with octave mutation (**inversion**)
- → **Complementary intervals**
- *Interval + Complementary = Octave*

Intervals

Specific Intervals

<i>Specific name</i>	Perf. unison	Aug. unison	Min. second	Maj. second
<i>Complementary</i>	Perf. octave	Dim. octave	Maj. seventh	Min. seventh
<i>Abbreviation</i>	P1 / P8	+1 / °8	m2 / M7	M2 / m7
<i>Semitone distance Δ</i>	0 / 12	1 / 11	1 / 11	2 / 10

Aug. second	Min. third	Maj. third	Perf. fourth	Aug. fourth
Dim. seventh	Maj. sixth	Min. sixth	Perf. fifth	Dim. fifth
+2 / °7	m3 / M6	M3 / m6	P4 / P5	+4 / °5
3 / 9	3 / 9	4 / 8	5 / 7	6 / 6

- With accidentals: several „versions“ of intervals
- Different „exact size“ (semitone distance)
- Notation: *Specific interval* = *Modifier* + *Generic interval* **(need both!)**
- Complementary: perfect ↔ perfect | major ↔ minor | dimin. ↔ augm.

Intervals

Specific Intervals

<i>Specific name</i>	Perf. unison	Aug. unison	Min. second	Maj. second
<i>Complementary</i>	Perf. octave	Dim. octave	Maj. seventh	Min. seventh
<i>Abbreviation</i>	P1 / P8	+1 / °8	m2 / M7	M2 / m7
<i>Semitone distance Δ</i>	0 / 12	1 / 11	1 / 11	2 / 10

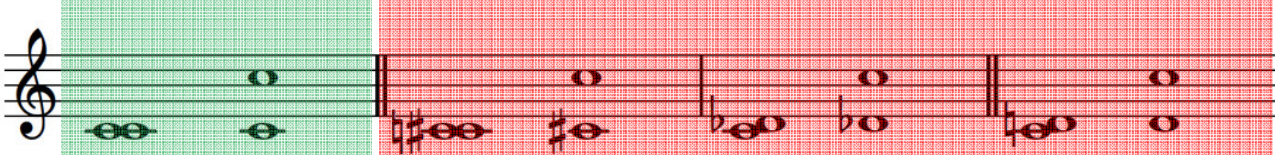

Aug. second	Min. third	Maj. third	Perf. fourth	Aug. fourth
Dim. seventh	Maj. sixth	Min. sixth	Perf. fifth	Dim. fifth
+2 / °7	m3 / M6	M3 / m6	P4 / P5	+4 / °5
3 / 9	3 / 9	4 / 8	5 / 7	6 / 6

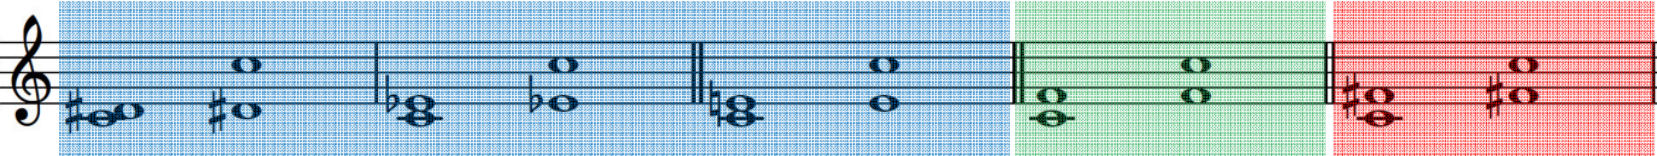

- Perfect intervals: 1 – 4 – 5 – 8
- Others: Major and minor
- All: Diminished and augmented
- In major scale: upward intervals always **perfect** or **major**

Intervals

Consonance & Dissonance

<i>Specific name</i>	Perf. unison	Aug. unison	Min. second	Maj. second
<i>Complementary</i>	Perf. octave	Dim. octave	Maj. seventh	Min. seventh
<i>Abbreviation</i>	P1 / P8	+1 / °8	m2 / M7	M2 / m7
<i>Semitone distance Δ</i>	0 / 12	1 / 11	1 / 11	2 / 10

Aug. second	Min. third	Maj. third	Perf. fourth	Aug. fourth
Dim. seventh	Maj. sixth	Min. sixth	Perf. fifth	Dim. fifth
+2 / °7	m3 / M6	M3 / m6	P4 / P5	+4 / °5
3 / 9	3 / 9	4 / 8	5 / 7	6 / 6

- Perfect consonances
- Imperfect consonances
- Dissonances

Intervals

Specific Intervals

Δ	Interval name	Interval	Jl ratio	Pyt. ratio
0	(Perfect) unison	C4 – C4	1:1	1:1
1	Minor second	C4 – D ^b 4	15:16	3 ⁵ :2 ⁸
2	Major second	C4 – D4	8:9	2 ³ :3 ²
3	Minor third	C4 – E ^b 4	5:6	3 ³ :2 ⁵
4	Major third	C4 – E4	4:5	2 ⁶ :3 ⁴
5	(Perfect) fourth	C4 – F4	3:4	3:2 ²
6	Tritone	C4 – F [#] 4	32:45	2 ⁹ :3 ⁶ or 3 ⁶ :2 ¹⁰
7	(Perfect) fifth	C4 – G4	2:3	2:3
8	Minor sixth	C4 – A ^b 4	5:8	3 ⁴ :2 ⁷
9	Major sixth	C4 – A4	3:5	2 ⁴ :3 ³
10	Minor seventh	C4 – B ^b 4	5:9	3 ² :2 ⁴
11	Major seventh	C4 – B4	8:15	2 ⁷ :3 ⁵
12	(Perfect) octave	C4 – C5	1:2	1:2

Intervals

Intervals in context

- **Harmonic intervals:** describing the relationships of concurrently sounding pitches (no „direction“)
- **Melodic intervals:** describing the relationships of successively sounding pitches (with direction)
- On the pitch class level: An interval progression corresponds to the **complementary** interval progression in **opposite direction**

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- Scales

Part II:

- Chords
- Keys and the Circle of Fifths

Enharmonic Equivalence

Intervals

<i>Specific name</i>	Perf. unison	Aug. unison	Min. second	Maj. second
<i>Complementary</i>	Perf. octave	Dim. octave	Maj. seventh	Min. seventh
<i>Abbreviation</i>	P1 / P8	+1 / °8	m2 / M7	M2 / m7
<i>Semitone distance Δ</i>	0 / 12	1 / 11	1 / 11	2 / 10

- Different specific intervals with same semitone distance
- → **Enharmonically equivalent intervals**
- Involve enharmonically **equivalent pitches**

Enharmonic Equivalence

Pitch classes

- Overtone series: Fifths as most important (non-octave) interval
- Construct scales from fifth series

- Pentatonic

- Diatonic

- Chromatic

Enharmonic Equivalence

Pitch classes

- Overtone series: Fifths as most important (non-octave) interval
- Scales as excerpts from fifth series

B \flat F \flat C \flat G \flat D \flat A \flat E \flat B \flat F C G D A E B F \sharp C \sharp G \sharp D \sharp A \sharp E \sharp B \sharp F \times

pentatonic
diatonic
chromatic
enharmonic

- Enharmonic: More than twelve fifths-related pitch classes
- → **enharmonically equivalent pitch classes**
- A **spiral**, not a **circle**!

Enharmonic Equivalence

Pitch classes

A musical staff in treble clef showing the 12 pitch classes: B \flat , F \flat , C \flat , G \flat , D \flat , A \flat , E \flat , B \flat , F, C, G, D, A, E, B, F \sharp , C \sharp , G \sharp , D \sharp , A \sharp , E \sharp , B \sharp , F \times . The notes are represented by half notes on a five-line staff. Below the staff, four horizontal arrows indicate different ways to group the notes: 'pentatonic' (B \flat to F), 'diatonic' (B \flat to F \sharp), 'chromatic' (B \flat to B \sharp), and 'enharmonic' (B \flat to B \sharp). To the right of the staff are two speaker icons, one above the other, indicating audio playback.

- Construction of pitch frequencies from pure **perfect fifths intervals** with ratio 3:2 → **Pythagorean tuning**
- Problem: 12 fifths are not exactly 7 octaves!
- → „Pythagorean comma“:

- Ratio:
$$\frac{(3/2)^{12}}{2^7} \approx 1.0136$$

- Distance in cents:
$$\log_2(1.0136) \cdot 1200 \approx 23.5 \text{ Cent}$$

Enharmonic Equivalence

Pitch classes

The image shows a musical staff with twelve pitch classes: B \flat , F \flat , C \flat , G \flat , D \flat , A \flat , E \flat , B \flat , F, C, G, D, A, E, B, F \sharp , C \sharp , G \sharp , D \sharp , A \sharp , E \sharp , B \sharp , and F \times . The notes are written on a treble clef staff. Below the staff, four interval types are indicated with brackets: pentatonic (covering five notes), diatonic (covering six notes), chromatic (covering seven notes), and enharmonic (covering all twelve notes). To the right of the staff are two speaker icons, one above the other, indicating audio playback.

- Consequence: Pure intervals (beating-free) and enharmonic equivalence **not possible** at the same time
- → Pythagorean comma needs to be „tempered“
- Different kinds of „temperament“
- **Twelve-tone equal temperament:**
 - Pythagorean comma **equally distributed**
 - Perfect fifth of size $23.5 / 12 \approx 2$ **Cents** smaller than pure fifth

Global tuning

Concert pitch

- Global tuning: shift of all frequencies
- Given by concert pitch (frequency of MIDI pitch 69 \triangleq **A4**)
 - Standard: $f_{\text{concert}} := 440 \text{ Hz}$
 - Historical tuning: $f_{\text{concert}}^{\text{hist}} := 415 \text{ Hz}$
- Compute frequency from MIDI pitch number

$$f_0(p) = 2^{(p-69)/12} \cdot f_{\text{concert}}$$

Further Computations

Equal temperament

- Pitch class numbers: $q \in [0 : 11]$

$$(0, 1, \dots, 11) \hat{=} (C, C\sharp, \dots, B)$$

- Pitch class from MIDI pitch: $q(p) = p \bmod 12$

- Interval in semitones: $\Delta(p^a, p^b) = p^b - p^a$

- Simple from compound interval: $\Delta_{\text{simple}} = \Delta_{\text{compound}} \bmod 12$

- Complementary from original: $\Delta_{\text{complementary}} = 12 - \Delta_{\text{original}}$

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- **Scales**

Part II:

- Chords
- Keys and the Circle of Fifths

Scale Families

Pitch class content

B \flat F \flat C \flat G \flat D \flat A \flat E \flat B \flat F C G D A E B F \sharp C \sharp G \sharp D \sharp A \sharp E \sharp B \sharp F \times

pentatonic
diatonic
chromatic
enharmonic

- Scale family only defines a specific **pitch class content**
 - Can be **transposed** (shifted) in different ways
 - Different **referential pitch classes** (tonic notes)

Scale Transpositions

Diatonic Scales

The image shows a musical staff with a treble clef and a key signature of one flat (B-flat). The scale consists of the following notes: B-flat, C, D, E, F, G, A, B. Brackets above and below the staff indicate transpositions relative to the original scale:

- +2 diatonic:** A bracket above the staff spans from the second note (C) to the eighth note (B).
- +1 diatonic:** A bracket above the staff spans from the third note (D) to the seventh note (G).
- 0 diatonic:** A bracket below the staff spans from the fourth note (E) to the sixth note (F).
- 1 diatonic:** A bracket below the staff spans from the fifth note (F) to the fifth note (F).
- 2 diatonic:** A bracket below the staff spans from the sixth note (F) to the fourth note (D).

To the right of the staff are two speaker icons, each with a play button symbol, indicating audio playback.

- Transposition corresponds to a **shift** in the fifth series
- Naming convention: according to the **accidentals** (key signature)
- Allows for measuring **distances** between diatonic scales

Specific Scales

Diatonic scales

- Different referential pitch classes (tonic notes): **(church) modes**

Realization in „0 Diatonic“

a) Dorian

b) Phrygian

c) Lydian

d) Mixolydian

e) Aeolian ($\hat{=}$ natural minor scale)

f) Locrian

g) Ionian ($\hat{=}$ major scale)

Realization over tonic note C

Specific Scales

Major scale

- Diatonic scale based on **second pitch class** in fifth series
- Results in semitones between scale degrees **3–4** and **7–8** (7–1)

<i>Degree</i>	1̂	2̂	3̂	4̂	5̂	6̂	7̂	8̂ = 1̂
<i>Name</i>	Tonic	Supertonic	Mediant	Subdominant	Dominant	Submediant	Leading Tone	Tonic
<i>Solfège</i>	do	re	mi	fa	sol	la	ti	do

Specific Scales

Minor scales

- **Natural** minor scale: Diatonic scale based on **fifth pitch class** in fifth series

Specific Scales

Minor scales

- **Natural** minor scale: Diatonic scale based on **fifth pitch class** in fifth series
- Results in semitones between scale degrees **2–3** and **5–6** (7–1)

a) Natural

b) Harmonic

c) Melodic

Specific Scales

Non-diatonic scales

a) Pentatonic

b) Acoustic

c) Whole tone

d) Hexatonic

e) Octatonic

- Symmetry in the equal-tempered scale: pitch class activation vectors (templates):

$$\mathbf{T}^{\text{Wholetone}} = (1, 0, 1, 0, 1, 0, 1, 0, 1, 0, 1, 0)^T$$

$$\mathbf{T}^{\text{Hexatonic}} = (1, 1, 0, 0, 1, 1, 0, 0, 1, 1, 0, 0)^T$$

$$\mathbf{T}^{\text{Octatonic}} = (1, 1, 0, 1, 1, 0, 1, 1, 0, 1, 1, 0)^T$$

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- Scales

Part II:

- Chords
- Keys and the Circle of Fifths

Chord

Definition

- „Sets of pitches that are perceived as an entity“
- Usually three (**triads**) or more pitches (**seventh chords**, ...)
- Can be realized in different ways, referring to the same „abstract“ chord

Triads

Basic types

Perfect 5th „stable“
Diminished 5th „unstable“
Augmented 5th

<i>Thirds</i>	(M3, m3)	(m3, M3)	(m3, m3)	(M3, M3)
<i>Frame interval</i>	P5	P5	°5	+5
<i>Triad type name</i>	Major	Minor	Diminished	Augmented
<i>Abbreviation</i>	M	m	°	+

- Three notes in **tertian structure** („snowman“)

- Structure:

Major Root note Major third Fifth

C major (C)

Minor Root note Minor third Fifth

C minor (Cm)

- Stability** according to frame interval (**fifth**)

Triads

Inversions

<i>Inversion</i>	Root pos.	1st inv.	2nd inv.	1st inv. (open pos.)
<i>Figured bass notation</i>	$(\frac{5}{3})$	6	$\frac{6}{4}$	6
<i>Bass note</i>	Root	Third	Fifth	Third

- Only bass pitch class is important
- Root position is most stable
- Caution: **Root pitch class ≠ bass pitch class!**

Triads

Pitch class sets

- Pitch class activation vectors (independent of inversion)
 - Major: $\mathbf{T}^{\text{CM}} = (1, 0, 0, 0, 1, 0, 0, 1, 0, 0, 0, 0)^{\text{T}}$
 - Minor: $\mathbf{T}^{\text{Cm}} = (1, 0, 0, 1, 0, 0, 0, 1, 0, 0, 0, 0)^{\text{T}}$
 - Diminished: $\mathbf{T}^{\text{Co}} = (1, 0, 0, 1, 0, 0, 1, 0, 0, 0, 0, 0)^{\text{T}}$
 - Augmented: $\mathbf{T}^{\text{C+}} = (1, 0, 0, 0, 1, 0, 0, 0, 1, 0, 0, 0)^{\text{T}}$

Seventh Chords

Basic types

<i>Thirds</i>	(M3, m3, M3)	(M3, m3, m3)	(m3, M3, m3)	(m3, m3, M3)	(m3, m3, m3)
<i>Triad+7</i>	(M, M7)	(M, m7)	(m, m7)	(°, m7)	(°, °7)
<i>Name</i>	Major 7	Dominant 7	Minor 7	Half-diminished 7	Diminished 7
<i>Abbr.</i>	M ^{maj7}	M ⁷	m ⁷	ø ⁷	o ⁷

- Three concatenated thirds
- Basic triad types + seventh (above the root)
- Other extensions as well (6, 9, 11, 13, ...) → jazz harmony

Figuration

Types

- Homophonic texture (no figuration): harmonic rhythm = rhythm
- **Figuration**: rhythm faster than harmonic rhythm
 - **Rhythmic** figuration: repeated chords / notes
 - **Harmonic** figuration: different chord notes (arpeggio)
 - **Melodic figuration**: involving non-chord tones (usually dissonant!)

Melodic Figuration

Non-chord tones

- Make harmony interesting
- „Chord modifications“ – no actual „chords“!
- Types
 - Pedal points
 - Passing tone
 - Neighbor note
 - Anticipation
 - Suspension

~~„suspended chord“~~

J. S. Bach, Jesu meine Freude BWV 227

Sopran
Je - su, mei - ne Freu - de, mei - nes Her - zens Wei - de,
ach wie lang, ach lan - ge ist dem Her - zen ban - ge,

Alt
Je - su, mei - ne Freu - de, mei - nes Her - zens Wei - de,
ach wie lang, ach lan - ge ist dem Her - zen ban - ge,

Tenor

Je - su, mei - ne Zier, Got - tes Lamm, mein Bräu - ti - gam,
und ver - langt nach dir!

Je - su, mei - ne Zier, Got - tes Lamm, mein Bräu - ti - gam,
und ver - langt nach dir!

Je - su, mei - ne Zier, Got - tes Lamm, mein Bräu - ti - gam,
und ver - langt nach dir!

Je - su, mei - ne Zier, Got - tes Lamm, mein Bräu - ti - gam,
und ver - langt nach dir!

9
au - ßer dir soll mir auf Er - den nichts sonst Lie - bers wer - den.
au - ßer dir soll mir auf Er - den nichts sonst Lie - bers wer - den.
au - ßer dir soll mir auf Er - den nichts sonst Lie - bers wer - den.
au - ßer dir soll mir auf Er - den nichts sonst Lie - bers wer - den.

Functional Harmony

Chord functions & Roman numerals

<i>Chord type</i>	M	m	m	M	M	m	°
<i>Function name</i>	Tonic	Subdominant parallel	Dominant parallel	Subdominant	Dominant	Tonic parallel	Incomplete dom. 7
<i>Function short</i>	T	Sp	Dp	S	D	Tp	D⁷
<i>Roman numeral</i>	I	ii	iii	IV	V	vi	vii°

m	°	M	m	M	M	M	°
Tonic	Incomplete dom. par. 7	Tonic parallel	Subdominant	Dominant	Subdominant parallel	Dominant parallel	Incomplete dom. 7
t	dP⁷	tP	s	D	sP	dP	D⁷
i	ii°	III	iv	V	VI	VII	vii°

- Capitals: Major & augmented chords
- Lowercase: Minor & diminished chords
- No „incomplete chords“

Functional Harmony

Chord relationships

- Parallel chords (e.g. C major – A minor): $M \begin{array}{c} \xrightarrow{\text{down m3}} \\ \xleftarrow{\text{up m3}} \end{array} m$
- Contrast chords (e.g. C major – E minor): $M \begin{array}{c} \xrightarrow{\text{up m3}} \\ \xleftarrow{\text{down m3}} \end{array} m$
- Major (minor) variant (e.g. C major – C minor): $M \begin{array}{c} \xrightarrow{\hspace{1cm}} \\ \xleftarrow{\hspace{1cm}} \end{array} m$
- → share each two pitch classes!

Functional Harmony

Chord progressions

Types:

- **Pendulum:** chord change and reverse (e.g. I – V – I)
- **Sequence:** repetition of same diatonic step (e.g. III – VI – II – V – I)
- **Cadence:** ending formula, often with closing character (e.g. II – V – I)

Functional Harmony

Chord progressions

- Authentic progressions: „falling“, „moving forward“, „directional“
- Plagal progressions: „opening“, „archaic“ („A-men“), colorful

Plagal 5th Authentic 5th

Plagal 3rd Authentic 3rd

Plagal 2nd Authentic 2nd

Interval	Δ	Complem.	Δ	Quality
P1	0	P8 ↘	-12	None

Music Theory Basics

Overview

Part I:

- Pitches and Intervals
- Tuning and Enharmonic Equivalence
- Scales

Part II:

- Chords
- Keys and the Circle of Fifths

Key

Definition

- „A set of pitch relationships that establishes a specific major or minor triad as a **tonal center**“
- Example: „**F major**“ = **tonic note** *F*, **mode** *major*, **tonic chord** *F major*
- With enharmonic equivalence: 24 keys
- Change of key: **Modulation**
- Types of modulation:
 - **Diatonic** modulations: **pivot chord** obtains new function
 - **Chromatic** modulation: one note or chord chromatically **altered**
 - **Enharmonic** modulation: **re-spelling** of pitch to obtain new function

Key

Key relationships

Special relationships & common modulations:

- **Relative** keys (same key signature, different tonic):

$$\text{F major} \xrightarrow{\text{down m3}} \text{D minor}$$

- **Parallel** keys (same tonic note, different mode):

$$\text{F major} \xrightarrow{\text{P1}} \text{F minor}$$

- **Fifth-related** keys (differ in one scale pitch class):

$$\text{F major} \xrightarrow{\text{up P5}} \text{C major}$$

- **Mediant** keys (third-related), e.g.:

$$\text{F major} \xrightarrow{\text{down m3}} \text{D major}$$

Key

Circle of fifths

- Actually (without enharmonic equivalence): **spiral not circle!**
- Use **series of fifths** instead...
